

Overview

Robotic Process Automation is one of the booming industries in today's digitally-driven economy. It mimics the way humans interact with software to perform repeatable tasks of high volume. With RPA, a business can automate tiresome rule-based tasks, thereby enabling the business users to devote more time to other higher-value work.

For Whom? This course will benefit the students who are graduating or graduated from any Engineering / Arts / Science Colleges with basic computer skills.

About the Program

This program helps the learners to gain hands-on experience in creating software bots and automating repeated processes.

Course

- Introduction to Robotic Process Automation
- Applications of Robotic Process Automation
- Installing UiPath Software
- Variables & Data Types in UiPath
- Control Flow
- IO Activities
- Recording in UiPath
- Data Scraping
- Excel Automation
- PDF Automation
- Case Studies
